

■ Porch Protocol Card

1. Physics-Grade Bee Deterrents (For Dramatic Flair)

Recite these equations like a cinematic physicist while retreating gracefully:

- Inverse-Square: $I(r) \propto 1 / r^2$ — “Intensity drops with distance, gentlemen; let’s all respect the function.”
 - Kirk’s Compression Mantra: $M(X,t) = k((C(X,t)/C(\blacksquare))$ — “Your mass-presence is emergent from curvature; un-compress, please.”
 - Conservation Flex: $\Delta p = 0$ unless external force acts — “Let’s not introduce external forces, yeah?”
 - Fluid Flow Flourish: $\nabla \cdot \mathbf{v} = 0$ — “No turbulent swatting fields today.”
 - Thermodynamic Timeout: $\Delta S = \int \delta Q / T$ — “Increase in entropy is inevitable, but stings aren’t.”
-

2. Actually Useful Bee-Kind Tactics

- Move slowly; don’t swat. Sudden motions trigger defense mode.
 - Step back 20–30 feet to break the guard radius.
 - Avoid floral scents, bright colors, and uncovered sweet drinks.
 - Hold still and exhale gently sideways if one buzzes near your face.
 - A handheld fan can gently redirect them without harm.
 - Note nest location—call a local beekeeper for relocation, not extermination.
 - After a sting: scrape (don’t squeeze) the stinger, clean, cool, and monitor for reactions.
-

“Increase in wisdom, not in entropy.” — Porch Protocol, v1.0
